# Low voltage

## General performance motors

---

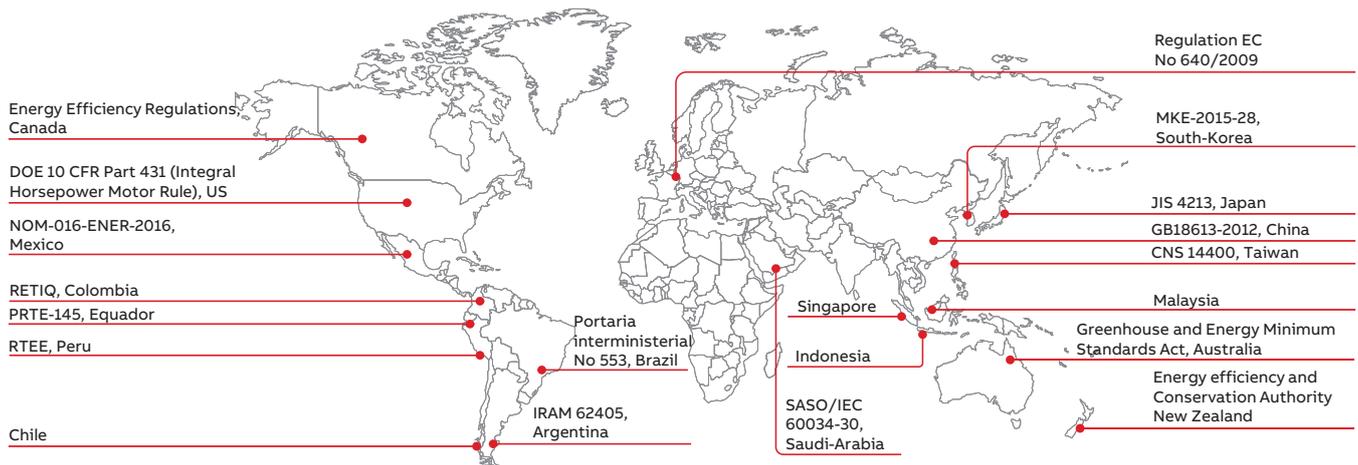

**With expertise, and a comprehensive portfolio of products and life-cycle services, we help value-minded industrial customers improve their energy efficiency and productivity.**

# Low voltage General performance motors

Sizes 56 to 355, 0.06 to 355 kW

|           |   |

# International motor efficiency standards and regulations

Since the validation of IEC 60034-30:2008 and its refined version IEC 60034-30-1:2014, a worldwide energy efficiency classification system has existed for low voltage three-phase asynchronous motors. These international standards have been created to enable and increase the level of harmonization in efficiency regulations around the world and to also cover motors for explosive atmospheres.

IEC 60034-30-1:2014 defines International Efficiency (IE) classes for single speed, three-phase, 50 Hz and 60 Hz induction motors. The efficiency levels defined in IEC 60034-30-1 are based on the test method specified in IEC 60034-2-1:2014. Both standards are part of an effort to unify motor testing procedures with CSA390-10 and IEEE 112 standards as well as efficiency and product labeling (IE) requirements to enable motor purchasers worldwide to easily recognize premium efficiency products.

To promote transparency in the market, IEC 60034-30-1 states that both the efficiency class and efficiency value must be shown on the motor rating plate and in product documentation. The documentation must clearly indicate the efficiency testing method used as different methods can produce differing results.

## Minimum energy performance standards

While the IEC as an international standardization organization sets guidelines for motor testing and efficiency classes, the organization does not regulate efficiency levels in countries. The biggest drivers for mandatory Minimum Energy Performance Standard (MEPS) levels for electric motors are global climate change, government targets to curb CO<sub>2</sub> emissions and rising electricity demand, especially in developing countries. The whole value chain, from manufacturer up to end user, must be aware of the legislation in order to meet local requirements, to save energy and reduce the carbon footprint.

Harmonized global standards and the increasing adoption of MEPS around the world are good news for all of us. However, it is important to remember that harmonization is an ongoing process. Even though MEPS are already in effect in several regions and countries, they are evolving and differ in terms of scope and requirements. At the same time, more countries are planning to adopt their own MEPS regulations. A view of existing and coming MEPS regulations in the world can be seen on the World map above.

### IEC 60034-30-1:2014

This standard defines four International Efficiency (IE) classes for single speed electric motors that are rated according to IEC 60034-1 or IEC 60079-0 (explosive atmospheres) and designed for operation on sinusoidal voltage.

- IE4 = Super premium efficiency
- IE3 = Premium efficiency, identical to the table in 10CFR431 ('NEMA Premium') in the USA and CSA C390-10:2015 for 60 Hz
- IE2 = High efficiency
- IE1 = Standard efficiency

IEC 60034-30-1 covers the power range from 0.12 kW up to 1000 kW. Most of the different technical constructions of electric motors are covered as long as they are rated for direct on-line operation. The coverage of the standard includes:

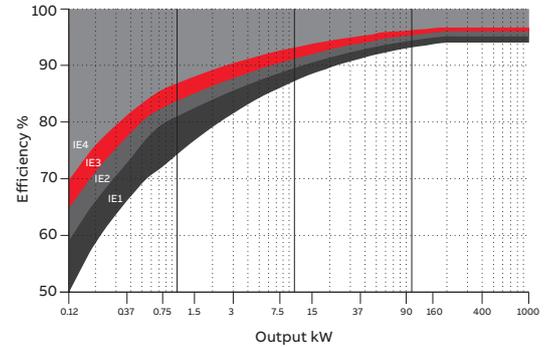

- Single speed electric motors (single and three-phase), 50 and 60 Hz
- 2, 4, 6 and 8 poles
- Rated output  $P_N$  from 0.12 kW to 1000 kW
- Rated voltage  $U_N$  above 50 V up to 1 kV
- Motors capable of continuous operation at their rated power with a temperature rise within the specified insulation temperature class
- Motors, marked with any ambient temperature within the range of -20 °C to +60 °C
- Motors, marked with an altitude up to 4000 m above sea level

By comparing IEC 60034-30-1 to CSA C390-10:2015 and "10CFR431 Subpart B – Electric motors", it can be seen that the efficiency limits and tables are well aligned and their major difference is in the scope of the output power where CSA and 10CFR431 have a maximum power of 500 hp. There are also some minor differences in the scope of excluded motors.

Note: CFR is Code of Federal Regulations.

The following motors are excluded from IEC 60034-30-1:

- Single-speed motors with 10 or more poles or multi-speed motors
- Motors completely integrated into a machine (for example pump, fan or compressor) that cannot be tested separately from the machine
- Brake motors, when the brake cannot be dismantled or separately fed

01

### ABB and efficiency standards

ABB determines efficiency values according to IEC 60034-2-1 using the low uncertainty method (i.e. summation of losses), with additional load losses determined by the method of residual loss.

It is good to mention and emphasize that the IEC 60034-2-1 test method, which is known as an indirect method, is technically equivalent to the test methods in the standards CSA 390-10 and IEEE 112 Method B leading to the equivalent losses and thus efficiency values. Both test methods can be used by ABB and shall be used for both Canada and the US where IEC 60034-2-1 is not recognized yet.

As the world market leader, ABB offers the largest range of LV motors available. It has long advocated the need for efficiency in motors, and high efficiency products have formed the core of its portfolio for many years. The core of ABB's Process performance range is based on a full range of IE2 and IE3 motors - with many available from stock. We also supply IE4 motors for additional energy savings.

**Nominal efficiency limits defined in IEC  
60034-30-1:2014 (reference values at 50 Hz,  
based on test methods specified in IEC 60034-  
2-1:2014).**

\*) Not stated in IEC 60034-7.

Note: If the motor is mounted shaft upwards, take measures to prevent water or any other liquid from running down the shaft into the motor.

# General information

## Cooling

Designation system concerning methods of cooling refers to standard IEC 60034-6.

### Explanation of the product code

| International Cooling | Circuit arrangement | Primary coolant | Method of movement of primary coolant | Secondary coolant | Method of movement of secondary coolant |
|-----------------------|---------------------|-----------------|---------------------------------------|-------------------|---|
| IC                    | 4                   | (A)             | 1                                     | (A)               | 6                                       |
|                       | 1                   | 2               | 3                                     | 4                 | 5                                       |

#### Position 1

0: Free circulation (open circuit)

4: Free circulatory (open circuit)

#### Position 2

A: For air (omitted for simplified designation)

#### Position 3

0: Free convection

1: Self-circulation

6: Machine-mounted independent component

#### Position 4

A: For air (omitted for simplified designation)

W: For water

#### Position 5

0: Free convection

1: Self-circulation

6: Machine-mounted independent component

8: Relative displacement

# General information

## Degrees of protection: IP code/IK code

Classification of degrees of protection provided by enclosures of rotating machines are refers to:

- Standard IEC 60034-5 or EN 60529 for IP code
- Standard EN 50102 for IK code

### IP protection

Protection of persons against getting in contact with (or approaching) live parts and against contact with moving parts inside the enclosure. Also protection of the machine against ingress of solid foreign objects. Protection of machines against the harmful effects due to the ingress of water.

#### Explanation of the IP code

| Ingress protection | Degree of protection to persons and to parts of the motors inside the enclosure | Degree of protection provided by the enclosure with respect to harmful effects due to ingress of water |
|--------------------|---|--|
| <b>IP</b>          | <b>5</b>  | <b>5</b>   |
|                    | 1   | 2  |

#### Position 1

|    |   |
|----|---|
| 2: | Motors protected against solid objects greater than 12 mm |
| 4: | Motors protected against solid objects greater than 1 mm  |
| 5: | Dust-protected motors                                     |
| 6: | Dust-tight motors   |

#### Position 2

|    |  |
|----|--|
| 3: | Motors protected against spraying water  |
| 4: | Motors protected against splashing water |
| 5: | Motors protected against water jets      |
| 6: | Motors protected against heavy seas      |

### IK code

Classification of degrees of protection provided by enclosure for motors against external mechanical impacts.

#### Explanation of the IK code

| International mechanical protection | Characteristic group |
|-------------------------------------|----------------------|
| <b>IK</b>                           | <b>08</b>            |
|                                     | 1                    |

#### Position 1

##### Relation between IK code and impact energy:

| IK code | Impact energy/Joule                 |
|---------|-------------------------------------|
| 0:      | Not protected according to EN 50102 |
| 01:     | 0.15                                |
| 02:     | 0.2                                 |
| 03:     | 0.35                                |
| 04:     | 0.5                                 |
| 05:     | 0.7                                 |
| 06:     | 1                                   |
| 07:     | 2                                   |
| 08:     | 5 (ABB Standard)                    |
| 09:     | 10                                  |
| 10:     | 20                                  |

# Insulation

—  
01 Safety margins per thermal class.

ABB uses class F insulation, which, with temperature rise B, is the most common requirement among industry today.

The use of class F insulation with class B temperature rise gives ABB products a 25 °C safety margin. This can be used to increase the loading for limited periods, to operate at higher ambient temperatures or altitudes, or with greater voltage and frequency tolerances. It can also be used to extend insulation. For instance, a 10 K temperature reduction will extend the insulation life.

### Thermal class 130 (B)

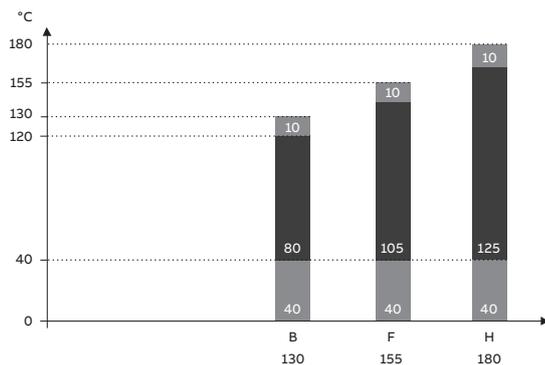

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 80 K
- Hot spot temperature margin 10 K

### Thermal class 155 (F)

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 105 K
- Hot spot temperature margin 10 K

### Thermal class 180 (H)

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 125 K
- Hot spot temperature margin 10 K

—  
01

# General information

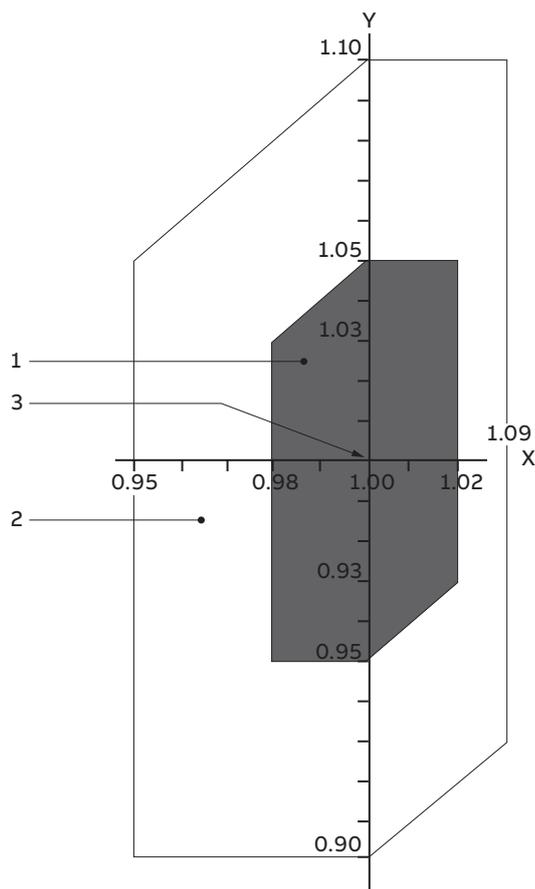

## Voltage and frequency

01 Voltage and frequency deviation in zones A and B.

The impact on temperature rise caused by voltage and frequency fluctuation is defined in IEC 60034-1. The standard divides the combinations into two zones, A and B. Zone A is the combination of voltage deviation of  $\pm 5\%$  and frequency deviation of  $\pm 2\%$ . Zone B is the combination of voltage deviation of  $\pm 10\%$  and frequency deviation of  $\pm 3\%$ . This is illustrated in figure below.

Motors are capable of supplying the rated torque in both zones A and B, but the temperature rise will be higher than at rated voltage and frequency. Motors can be run in zone B only for a short period of time.

| Key    |                         |
|--------|-------------------------|
| X axis | frequency p.u.          |
| Y axis | voltage p.u.            |
| 1      | zone A                  |
| 2      | zone B (outside zone A) |
| 3      | rating point            |

General performance cast  
iron M2BAX motor.

The motor's main rating plate shows the motor's performance values with various connections at nominal speed. The rating plate also shows the efficiency level (IE2, IE3), year of manufacture, and the lowest nominal efficiency at 100, 75, and 50 % nominal load.

The lubrication plate specifies regreasing amount, regreasing interval in hours - depending on the mounting position and ambient temperature - and types of lubricant recommended.

# Variant codes

## IE3 and IE2 General performance cast iron motors

Variant codes specify additional options and features to the standard motor. The desired features are listed as three-digit variant codes in the motor order. Note also that there are variants that cannot be used together.

Most of the variant codes apply to IE2 and IE3 motors. For details please contact your ABB sales office before making an order.

# Mechanical design

## Bearings

General performance motors are normally fitted with single-row deep-groove ball bearings, as shown in the table below.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt-drive applications and can be ordered with variant code 037.

### Standard and alternative designs

### Axially-locked bearings

All motors are equipped as standard with an axially locked bearing at the D-end.

# Mechanical design

## Radial forces

### Permissible loading on the shaft

The following table shows permissible radial forces on the shaft in Newtons, assuming zero axial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20 000 and 40 000 hours per motor size.

These calculated values further assume mounting position IM B3 (foot-mounted), with force directed sideways. In some cases, the strength of the shaft affects permissible forces.

Permissible loads of simultaneous radial and axial forces can be supplied on request.

If the radial force is applied between points X0 and Xmax, the permissible force  $F_R$  can be calculated with the following formula:

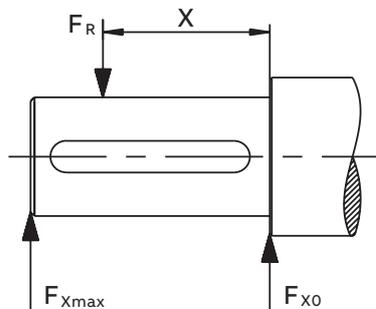

$$F_R = F_{X0} - \frac{X}{E} (F_{X0} - F_{Xmax})$$

---

**Where:**

E: length of the shaft extension in the standard version

---

## Permissible radial forces

# Mechanical design

## Axial forces

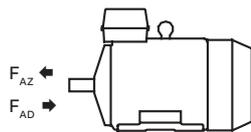

01 Mounting arrangement IM B3.

02 Mounting arrangement IM V1.

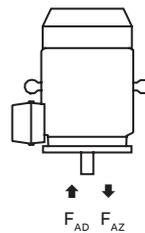

The following tables present permissible axial forces on the shaft in Newtons, assuming zero radial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20,000 and 40,000 hours per motor size.

At 60 Hz, the values must be reduced by 10 percent, and for two-speed motors, the higher speed determines permissible axial force. Permissible loads of simultaneous radial and axial forces can be supplied on request.

For axial force  $F_{AD}$ , it is assumed that the D-bearing is locked with a locking ring.

01

02

### Permissible axial forces

| Motor size | Poles | Length of shaft extension<br>E (mm) | Mounting arrangement IM B3 |              |              |              | Mounting arrangement IM V1 |              |              |              |

# Variant codes

## IE2 General performance aluminum motors

Variant codes specify additional options and features to the standard motor. The desired features are listed as three-digit variant codes in the motor order. Note also that there are variants that cannot be used together.

| Heating elements        | Optional                    | 8 W  | 25 W       |                               |  |  |            |            |                          |  |
| Enclosure               |                             | IP 55  |            |                               |  |  |            |            |                          |  |
| Cooling method          |                             | IC 411   |            |                               |  |  |            |            |                          |  |
| Drain holes             |                             | Without drainholes                                   |            |                               | Drain holes with closable plastic plugs, open on delivery. |  |            |            |                          |  |
| Lifting lugs            |                             | Without lifting lugs                                 |            |                               | Integrated with the stator                                 |  |            |            |                          |  |

# Motors in brief

## General performance aluminum motors, sizes 160 - 250

| Size                | M2AA                        | 160  | 180        | 200        | 225                                       | 250        |
|---------------------|-----------------------------|--|------------|------------|---|------------|
| Stator              | Material                    | Die-cast aluminum alloy                                    |            |            | Extruded aluminum alloy                   |            |
|                     | Paint colour shade          | Munsell blue 8B 4.5/3.25                                   |            |            |   |            |
|                     | Surface treatment           | Polyester powder paint, $\geq 60\mu\text{m}$               |            |            |   |            |
| Feet                |                             | Detachable feet  |            |            |   |            |
|                     | Material                    | Aluminum alloy   |            |            | Cast iron                                 |            |
| Bearing end shields | Material                    | Cast iron EN-GJL-200/GG 20/GRS 200                         |            |            |   |            |
|                     | Paint colour shade          | Munsell blue 8B 4.5/3.25 / NCS 4822 B05G                   |            |            |   |            |
|                     | Surface treatment           | Two-pack epoxy pain paint, $\geq 60\mu\text{m}$            |            |            |   |            |
| Bearings            | D-end                       | 6209-2Z/C3   | 6210-2Z/C3 | 6212-2Z/C3 | 6213-2Z/C3                                | 6215-2Z/C3 |
|                     | N-end                       | 6209-2Z/C3   | 6209-2Z/C3 | 6209-2Z/C3 | 6210-2Z/C3                                | 6212-2Z/C3 |
| Axially-locked      | Inner bearing cover         | D-end  |            |            |   |            |
| Bearing seals       |                             | Axial seal   |            |            |   |            |
| Lubrication         |                             | Permanently lubricated shielded bearings.                  |            |            |   |            |
| Terminal box        | Material                    | Die-cast aluminum alloy, base integrated with stator.      |            |            | Deep-drawn steel sheet, bolted to stator. |            |
|                     | Surface treatment           | Polyester powder paint, $\geq 60\mu\text{m}$               |            |            | Phosphated. Polyester paint.              |            |
|                     | Screws                      | Steel 8.8, zinc electroplated and chromated                |            |            |   |            |
| Connections         | Knock-out openings          |  |            |            | 2 x FL13, 2 x M40                         |            |
|                     | Flange openings             | (2 x M40 + M16) + (2 x M40)                                |            |            | 2 x FL 21, 2 x M63 (voltage code S)       |            |
|                     | Max Cu-area mm <sup>2</sup> | 35   |            |            | 70  |            |
|                     | Terminal box                | 6 terminals for connection with cable lugs (not included)  |            |            |   |            |
|                     | Screws                      | M6   |            |            | M10                                       |            |
| Fan                 | Material                    | Polypropene. Reinforced with 20% glass fibre.              |            |            |   |            |
| Fan cover           | Material                    | Hot dip galvanized steel                                   |            |            |   |            |
|                     | Paint colour shade          | Black, NCS 8801-B09G                                       |            |            |   |            |
|                     | Surface treatment           | Polyester powder paint, $\geq 60\mu\text{m}$               |            |            |   |            |
| Stator winding      | Material                    | Copper   |            |            |   |            |
|                     | Insulation class            | Insulation class F   |            |            |   |            |
|                     | Winding protection          | 3 PTC thremistors as standard, 150°C                       |            |            |   |            |
| Rotor winding       | Material                    | Diecast aluminum   |            |            |   |            |
| Balancing method    |                             | Half key balancing   |            |            |   |            |
| Key Ways            |                             | Closed key way   |            |            |   |            |
| Heating elements    | Optional                    | 25 W   |            | 50W        |   |            |
| Enclosure           |                             | IP 55  |            |            |   |            |
| Cooling method      |                             | IC 411   |            |            |   |            |
| Drain holes         |                             | Drain holes with closable plastic plugs, open on delivery. |            |            |   |            |
| Lifting lugs        |                             | Integrated with the stator                                 |            |            | Bolted to the stator                      |            |

# Total product offering

Motors, generators and mechanical power transmission products with a complete portfolio of services

## IEC motors

- Low voltage motors
- High voltage induction and synchronous motors
- Marine motors
- Motors for explosive atmospheres
- Motors for food and beverage
- Motors for variable speed drives
- Permanent magnet motors
- Synchronous reluctance motors
- Traction motors

## NEMA motors

- Low voltage motors
- High voltage induction and synchronous motors
- Marine motors
- Motors for explosive atmospheres
- Motors for variable speed drives
- Permanent magnet motors
- Servomotors
- Washdown motors

## Generators

- Generators for wind turbines
- Generators for diesel and gas engine power plants
- Generators for steam and gas turbine power plants
- Generators for marine applications
- Generators for industrial applications
- Generators for traction applications
- Synchronous condensers for reactive power compensation

## Mechanical power transmission components, bearings, gearings

- Mounted bearings
- Enclosed gearing
- Mechanical drive components
- Couplings
- Sheaves and bushings
- Conveyor components
- Geared motor units

## Life cycle services

# ABB's portfolio of drives

## Optimal solution for you

Being able to rely on the continuous high performance and efficiency of your operations is something you want to take for granted. ABB variable-frequency drives are made with all this in mind, established upon more than 40 years of experience and backed by a broad range of life cycle services.

ABB drives help you to optimize your processes and systems with state-of-the-art motor control technology, resulting in increased energy efficiency, better product quality, and reduced operating costs with higher output, less downtime, and reduced need for maintenance. All ABB drives are designed for easy selection, ordering, installation and use, and they offer integrated safety features, giving you more time to focus on what matters for you and your business.

Our portfolio offers low-voltage AC and DC drives, medium-voltage AC drives, and motion control drives spanning the fractional-kilowatt to multi-megawatt power level. There is a drive available for essentially every industry and application, which can be used with all types of motors, in environments ranging from clean electrical rooms in buildings, to harsh coal mines and windy offshore platforms. This wide product range allows you to select the best-fitting drive solution, providing maximum reliability and efficiency for every need.
